I have participated five times in Japanese Antarctic Research Expedition (from JARE 20, 1978 to JARE 51, 2009). Two expeditions (JARE 27 and 51) were conducted as summer parties. The remaining three were wintering parties. Two austral summer seasons during two wintering parties (JARE 20 and 39) conducted meteorite searches. In the remaining one wintering, I worked at the Syowa station for administration. JARE 20 and JARE 39 wintering parties conducted meteorite searches in bare icefields near the Yamato and Belgica Mountains. JARE 27 and JARE 51 summer parties conducted near the Sor Rondane Mountains. Main purpose of JARE 27 was geological research. In this presentation, I will show you many slides of my attendance to JAREs
